

How to add and configure a team member in Altegio

Team members are the staff who provide services at your location. Adding a team member makes them available in the appointment calendar, enables online booking, and connects them to payroll. After creating a team member, you configure their profile, services, schedule, access rights, and more across nine tabs on their settings card.

Team members list

Switch to **Administration** mode using the yellow button in the bottom-left corner, then open **Team** > **Team members list** from the left menu.

The page shows everyone at this location. Use the search field to filter by name or contact details. Five dropdowns — **Position**, **Employment status**, **Account status**, **Access**, and **Subscription** — let you narrow the list further. A results counter shows how many team members match the current filter. Click **Find** to apply filters, or **Reset** to clear them all.

Three tabs change how the list is grouped: **Position** groups team members by job role, **Specialization** groups them by specialization, and **System users** shows only team members who have active login access.

Adding a team member

1. Click **+ Add** in the top-right corner of the Team members list page.

2. A side panel opens on the right with two cards. Click the **Employee** card to open the new team member form. (The **Position** card creates a job role used for grouping — it is not a team member.)

The form opens. The **Team members included in the subscription** counter at the top shows your current quota usage (for example, 13/30). If you have reached the limit, click **Go to Billing** to upgrade your plan, or **Learn More** to read about subscription tiers before continuing.

3. Enter the team member's **Name** — this is how they appear throughout the system and to clients.
4. Select a **Specialization** from the dropdown (for example, "Hair Stylist"). Clients see this label next to the team member's name in the online booking widget.

The screenshot shows the 'Add new team member' form. On the left, there's a 'Team members list' sidebar with a search bar and filters. The main form area has a progress bar at the top showing '13/30' team members included in the subscription. Below this, there's a 'Name' field containing 'Anna Smith' and a 'Specialization' dropdown menu set to 'Hair Stylist'. The 'Team member settings' section has two radio button options: 'Billable member' (which is selected) and 'Non-billable member'. Under 'Billable member', there's a checkbox for 'Allegio access'. At the bottom right of the form, there are 'Cancel' and 'Save' buttons.

5. Under **Team member settings**, choose the billing type:
 - **Billable member** — counts toward your subscription quota when the team member has a work schedule enabled or editing permissions. Use this for staff who provide services or manage the business.
 - **Non-billable member** — does not count toward the quota as long as the team member has no work schedule and read-only access. Suitable for owners or administrators who manage the subscription without taking bookings.
6. Enable the **Allegio access** toggle if you want the team member to be able to log in immediately. You can also grant access later from the **Access** tab.
7. Click **Save**. The team member is created and their settings card opens automatically.

IMPORTANT

A newly created team member will not appear in the appointment calendar or in the online booking widget until you assign at least one service in the **Services** tab and set up working hours in the **Work Schedule** tab.

Team member card

Click any team member's name in the list to open their settings card. The card has nine tabs across the top — use the arrow buttons at either end of the tab strip to scroll when not all tabs fit on screen.

Every tab has a **Save** button at the bottom right. At the bottom left, **Delete** permanently removes the team member and **Dismiss** marks them as no longer working at the location while preserving their history.

Information tab

The Information tab is where you set the team member's public-facing profile. The **Display name** appears in the appointment calendar and in the online booking widget — use the name that clients and colleagues will recognize. **Position** groups the team member in the list by job role (positions are configured separately in **Team > Positions**). **Specialization** describes what they do and appears next to their name when clients book online.

Upload a photo by clicking the photo area on the right. Accepted formats are JPEG or PNG, up to 12 MB. Click **Edit image** to replace an uploaded photo, or the trash icon to remove it.

If this team member belongs to a chain, a banner reads "The team member belongs to the '...' chain. They can only be modified in the employee settings in the chain dashboard" — core profile fields become read-only at the location level.

Services tab

The Services tab controls which services this team member can perform. The tab label shows the total count of assigned services as a badge (for example, "Services 37").

Click **Assign services** to select existing services from the catalog, or **+ Create a service** to add a new service directly from this tab. Use the search field to filter by service name. Services are grouped by category — click a category row to expand it and see individual services. The row shows how many services from that category are assigned (for example, "Haircuts — Provides: 6 of 6").

A team member with no assigned services will not appear in the appointment calendar or in the online booking widget, even if they have a work schedule. Assign at least one service to make them bookable.

Online booking tab

The Online booking tab controls whether and how clients can book this team member through the online booking widget. The settings are organised into several sections that you scroll through within the panel.

At the top, choose **Available for online booking** (the default) or **Not available for online booking**. Set the latter for team members who only take appointments through a receptionist or who are not customer-facing.

Under **Professional's profile**, add a short bio in the **Description** field — this appears next to the team member's photo in the booking widget and helps clients pick a specialist. Enable **Professional's rating** to display the team member's star rating and review count alongside their name.

Under **Preferences**, two options refine the booking flow. **Online prepayment** requires clients to pay in advance when booking this team member — useful for in-demand specialists or when no-show rates are high. **Skip professional selection** includes this team member in the pool when clients choose "Any available professional" rather than picking by name.

Under **Available time for online booking**, choose how this team member's availability is calculated. Keep **General for the location** to use the location-wide booking window (the default), or switch to **Personal for the professional** to override that window with hours specific to this team member. The personal setting is useful when one specialist is online-bookable on weekends while the rest of the team is not.

Under **Unavailable days for online booking**, block specific days from online booking — for example, planned days off, training days, or busy in-house events. Click **Add** to insert a date range; clients will not see those days as bookable, even if the team member's work schedule shows them as working.

Under **Available slots for booking**, configure how the booking widget arranges time slots for this team member. The default uses the location's slot interval; switch this for specialists whose service durations don't fit the standard grid.

Under **Rules for arranging slots**, fine-tune slot generation per weekday. Click **Add** to create a new rule (for example, "30-minute slots on Mondays and Wednesdays only"), **Edit rules** to modify an existing rule's days, slot length, or buffer time, and **Remove rule** to delete a rule that's no longer needed. Click **Add exception for weekdays** to register a one-off override (for example, "this Friday, no booking after 14:00").

For chain team members, an info banner on this tab reminds you that profile data must be edited in the chain's employee settings — the location-level settings become read-only.

Payroll tab

The screenshot displays the 'Payroll' tab for a team member named Cathrine. On the left, a 'Team members list' sidebar shows a search bar with 'Cathrine' and a list of team members, including Cathrine Chan, a Hairdresser. The main panel on the right is titled 'Cathrine' and features a navigation bar with tabs: Information, Services, Online booking, Payroll (highlighted with a red box), Work Schedule, Access, and Notifications. Below the navigation bar, the 'Payroll' section includes an 'Assistance settings' toggle, a 'Copy from another employee' button, and two compensation sections: 'Service-based compensation' and 'Product sales compensation'. The 'Product sales compensation' section is currently active, showing options to 'Pay a percentage for sold products' (selected) and 'Calculate payout based on product price minus its prime cost'. A 'Save' button is located at the bottom right of the main panel.

The Payroll tab defines how this team member is compensated. Click **Copy from another employee** at the top to duplicate the payroll setup from an existing team member and use it as a starting point — useful when onboarding several specialists in the same role.

The tab offers six compensation toggles. Each can be enabled independently and then configured with payout values, percentages, and adjustments. The total payout is the sum of all active

components.

Enable **Pay based on services personally provided** to pay a percentage of the amount paid at the cash register for services this team member performed. You can include or exclude specific payment types (discounts, bonuses, memberships, gift cards, client credit, promotions) from the payout base, and set different rates per service or service category.

Enable **Pay a percentage for sold products** to add a commission on product sales rung up by this team member. Set the **Payout value** and currency. Three sub-options refine the calculation. Enable **Set value per product or category** for granular per-item or per-category rates instead of a flat percentage. Enable **Adjust for loyalty programs and discounts** to exclude promotional payments from the commission base. Enable **Adjust prime cost** (also shown as "Calculate payout based on product price minus its prime cost") to base the commission on net price (sale price minus the product's prime cost), so the team member only earns commission on actual margin.

Enable **Pay for showing up to work** to include base pay, bonuses, or a guaranteed minimum tied to attendance rather than sales — for example, a fixed daily rate, a guaranteed-minimum top-up if commissions don't reach a threshold, or a bonus for full-month attendance. Configure the amount and the qualifying conditions after enabling the toggle.

Enable **Pay for managing client bookings and appointments** to compensate the team member for the back-office work of arranging bookings, confirming appointments, and managing the schedule — typically used for receptionists or hybrid roles. Set a per-booking fee or a periodic flat amount.

Enable **Company revenue share — services** to add a separate revenue-share component for services. Useful when a specialist owns a stake in the location's service revenue beyond their personal sales — for example, an equity-holding senior specialist who earns a small percentage of the entire team's service revenue. Enable **Company revenue share — products** for the product equivalent — a percentage of the location's total product sales.

A purple banner appears at the top of the tab if your location uses assistants: *"If your company's professionals can work as assistants during the provision of services, you must enable these settings in the 'General settings'."* Click **Go to general settings** to configure assistant rules before saving — without that step, payroll will not calculate correctly when this team member acts as an assistant.

Work Schedule tab

The Work Schedule tab links this team member to a working hours configuration. Without a work schedule, the team member has no available slots in the appointment calendar and will not appear in online booking — even if they have services assigned.

Set up recurring shifts, days off, and breaks here. For location-wide scheduling options such as shift patterns and public holidays, use **Settings > Work Schedule** in the left sidebar.

Access tab

The Access tab controls whether this team member can log into Altegio and what they can do once logged in. The tab is organised into two main blocks — **System Access** and **Access rights** — followed by a long list of permission groups and several location-level checkboxes at the very bottom.

Toggle **Grant system access** at the top to enable login. When the toggle is off, the team member has no login credentials and the rest of the tab is hidden. When it's on, two contact fields appear: **Email** is used as the login (the team member receives an invitation there), and **Phone number** is a secondary contact, also usable for login if SMS sign-in is enabled at the location. The **Information** field below the contacts is a free-form note visible to administrators only — useful for tagging the team member's contract type, team, or any context that helps owners audit access later.

Under **Access rights**, the role dropdown assigns a pre-configured permission set. Eight roles are available, each with a short description shown next to its name in the dropdown:

- **Owner** — has full access. Reserved for business owners and the most senior administrators.
- **Manager** — manages the location. Broad access to operations, finance, and team management.
- **Accountant** — responsible for payroll management. Focused on financial reports and salary calculations.
- **Call center** — assists clients and schedules appointments. Appointment-calendar and client-base focused.

- **Receptionist** — responsible for appointments and their payment. Front-desk role with cash-register access.
- **Team member** — provides services. The default for specialists who only need to see their own schedule and clients.
- **Viewer** — read-only access. Useful for trainees, auditors, or temporary staff who should not change anything.
- **System manager** — team management and subscription purchase. Limited to staff and billing administration.

After picking a role, the permission groups below auto-fill with that role's defaults. You can then fine-tune individual permissions by expanding any group.

Three controls help manage permissions over time: **Permission history** opens a log of every change made to this team member's permissions with timestamps and the user who made each change; **Copy permissions** duplicates the permission set from another existing team member, useful when onboarding several people in the same role; the **■ (more)** menu offers additional actions like reset to defaults. Use the **search** field to jump straight to a specific permission by name when the list is long.

Below the search, permissions are grouped by area. Each group shows a counter (for example, **34 of 36 permissions**) and a master toggle that enables or disables the entire group. Click a group's chevron to expand it and toggle individual permissions one by one. The full list of groups, in display order:

- **Appointment Calendar** — view/edit appointments, create visits, manage the daily calendar grid.
- **Booking window** — control the online booking widget settings, availability, and rules.
- **Finance** — view cash registers, payments, refunds, and financial reports.
- **Products** — manage the product catalog, sales, and inventory.
- **Staff** — view and edit other team members.
- **Services** — manage the service catalog and pricing.
- **Notifications** — configure system notifications and templates.
- **Settings** — access location-level settings (positions, resources, integrations, schedule rules).
- **All Clients** — view and edit the entire client database, including contact data, visit history, and tags.
- **Reports** — open analytical reports (financial, storage, occupancy, payroll).
- **Loyalty** — configure loyalty programs, discount cards, certificates, and promotions.
- **Billing** — view subscription plan, invoices, and billing history (typically owners only).
- **Online booking** — manage the online booking widget configuration.

Below the permission groups, three more controls govern location-level access for this team member. The **Allow access to the location only from IP-addresses (v4, v6)** checkbox restricts

logins to a specific list of allowed IP addresses (set in **Settings > Security**) — useful for receptionists who should only log in from the salon Wi-Fi. The **Resources** checkbox allows this team member to manage shared resources like rooms, equipment, and chairs. The **Make SMS mailings to clients** checkbox grants the right to launch bulk SMS campaigns to the client base. The **Adding location to chain** checkbox lets the team member attach the current location to an existing chain — generally reserved for franchise owners.

Use these groups and checkboxes to give each team member only the access they need — for example, a junior receptionist might have the full **Appointment Calendar** and **Online booking** groups enabled, **Make SMS mailings to clients** unchecked, and every permission in **Finance** and **Reports** turned off.

Notifications tab

The screenshot shows the 'Team members list' interface. On the left, there's a search bar with 'Lora' entered and a '+ Add' button. Below the search bar are filters for 'All', 'Not dismissed', 'Not deleted', and 'All'. A 'Find' button is also present. A message box states: 'We've refreshed things! The access and roles settings interface just got an update — check out the article to see what's new'. Below this, there's a table with columns 'Position', 'Specialization', and 'System users'. The 'Without position' section shows 'Team members: 1'. The 'Team member' section shows a card for 'Lora' with a phone number '+36 20 380 6190' and an email 'yanabaz2304@gmail.com'. On the right, the 'Notifications' tab is selected and highlighted in red. The 'Notification settings' section includes a dropdown for 'Notification types' (set to 'Based on access rights'), a checkbox for 'Client data', and a table for 'Notification type' and 'Delivery channels'. The 'Web version notifications' section includes checkboxes for 'Appointment actions' and 'Incoming calls'.

The Notifications tab configures which system alerts this team member receives, and how (SMS, email, push, or web). The tab is split into a **Notification settings** block for events sent to the team member's phone or inbox, and a **Web version notifications** block for in-app alerts shown while they are logged into Altegio.

The **Notification types** dropdown at the top sets the overall scope of what the team member sees. **Based on access rights** (the default) means they receive notifications only for sections they have permission to see. **All notifications** sends every event regardless of permissions — use this for owners and managers who need full visibility. **Custom** lets you pick specific events one by one in the table below. The **Client data** checkbox below the dropdown controls whether outgoing notifications include the client's full name and phone number. Disable it for staff who should see

appointment events but not client contact details — a common privacy requirement.

The notification-type table is the core of the tab. Each event row has a master toggle plus three delivery-channel checkboxes — **SMS**, **Email**, and **Push**. Enable the toggle, then pick one or more channels. The available events are:

- **Appointment creation by client** — the client booked themselves through the online widget.
- **Appointment creation by receptionist** — someone on the team booked the appointment for the client.
- **Appointment cancellation by client or receptionist** — any cancellation, regardless of source.
- **Appointment rescheduling by client or receptionist** — the appointment was moved to a different time.
- **Subscription expiration** — the location's Altego subscription is about to expire (typically only relevant for owners).
- **Email with automatically generated payment documents** — receipts and invoices generated by the system.
- **Booking cancellation by receptionist** — a more specific cancellation event for receptionist actions.

Some rows may be greyed out if the corresponding feature isn't enabled at the location (for example, payment documents are only available when the integrated billing module is on).

The bottom section, **Web version notifications**, controls in-app alerts shown to this team member while they are logged into the web version of Altego. Enable **Appointment actions** for pop-up notifications on appointment creation, rescheduling, deletion, and QR-code payments. Enable **Incoming calls** for pop-up notifications when a client phones the salon (requires the integrated telephony module).

If the team member does not have system access, this tab shows the message **"No access — Assign access rights to a team member to set up notifications."** along with an **Assign rights** button that takes you directly to the Access tab. Notifications only become editable once login access is granted, since notifications are tied to the team member's account session.

Settings tab

The Settings tab holds three configuration areas:

Appointments — pick a color from the **Markup in Appointment Calendar** dropdown to make this team member's appointment blocks visually distinct in the daily calendar view. Enable **Hide team member from Appointment Calendar** to remove them from the calendar without dismissing them — useful for staff who work behind the scenes.

Statistics — enable **Include team member in occupancy statistics** to count this team member in location-level occupancy and workload reports. Disable this for team members who should not influence reporting (for example, staff who do not provide billable services).

Integration — click **Sign in with Google** to link this team member's calendar with Google Calendar, then enable **Export client data to Google Calendar** to sync appointment details. If an external system references this team member by a custom identifier, enter it in the **External ID** field.

Legal information tab

The screenshot shows a web interface with two main panels. The left panel, titled 'Team members list', contains a search bar with 'Cathrine' entered, several filter dropdowns (All, Not dismissed, Not deleted, All, All), and a table with one member, Cathrine Chain. The right panel, titled 'Cathrine', has a top navigation bar with icons for Online booking, Payroll, Work Schedule, Access, Notifications, Settings, and 'Legal information' (which is highlighted with a red box). Below the navigation bar is a purple banner with a warning icon and text: 'This information is visible only to you and integrations with team member access. Only enter data if you have the client's written consent to store/process their data.' The main form area contains fields for Name, Last name, Middle name, Citizenship (Not specified), Gender (Unknown), ID number (AB12345678), TIN (Not specified), Policy ID (Not specified), Employment start date (dd.mm.yyyy), Registration/patent expiration date (dd.mm.yyyy), and Additional phone number (Not specified). At the bottom of the form are 'Delete', 'Dismiss', and 'Save' buttons.

The Legal information tab stores the team member's personal and tax data for legal and accounting purposes. A purple banner at the top reads: "This information is visible only to you and integrations with team member access. Only enter data if you have the client's written consent to store/process their data."

Fill in the fields required for your location:

- **Name, Last name, Middle name** — the team member's legal name as it appears on official documents.
- **Citizenship** — country of citizenship.
- **Gender** — selected from a dropdown ("unknown" by default).
- **ID number** — government-issued identification number.
- **TIN** — taxpayer identification number, used for the chain team report, for tips, and when printing receipts.
- **Policy ID** — insurance or social-security policy identifier, used when reporting payroll to local authorities.
- **Employment start date** — the date this team member was hired (format dd.mm.yyyy).
- **Registration/patent expiration date** — expiration of a work permit or registration document, if applicable.
- **Additional phone number** — a secondary contact number.

Click **Save** after entering the data.
